Introduced in AutoCAD 2004 was the first version of the DxfView application. It was a part of AutoCAD 2004, Autodesk's native real-time 3D modeling software. AutoCAD 2000 has the ability to import objects from Autodesk's 3D Studio Max. These are then loaded into the main CAD model, to a level similar to a third-party modeler. For example, you could use a 3D Studio Max program to create an organic model, and then import that model into a drawing containing non-organic geometry, and have the organic geometry auto-generated based on the non-organic model. This was an important step for releasing AutoCAD into a professional work environment. It gave users a simple way to save time and give them the flexibility to work in different CAD applications. Among the unique features of AutoCAD 2000 are: The ability to read and import images as well as other formats of data The ability to save a drawing as a DXF file The ability to select parts of the image, merge them together into one image The ability to undo and redo multiple operations Some basic image editing capabilities AutoCAD first came in a stand-alone version for DOS computers. In the mid-1990s, a Windows version was created, first as part of the ObjectARX product, and then as a stand-alone program. Pascal scripting The Pascal scripting language was introduced in AutoCAD 1982. Originally used to script key functions of the product, it gradually became a standard language for application development. The language has also been developed for the PL/I language and the Windows Scripting Host. AutoCAD 2007 introduced Script Maker, an AutoCAD extension that can be accessed from the Mac OS X scripting GUI, and script editing tools. Script Maker is designed to make it easier to create scripts, and allows the scripts to be run through the script interface. The ability to create scripts was one of the most requested features of AutoCAD 2012. However, the scripting language did not change much in that release. During this month, we're talking about mental health awareness, mental health policies, mental health resources, and more. Some of the topics we're covering are Depression Awareness Month, April's Mental Health Awareness Month, the American Foundation for Suicide Prevention, and National Suicide Prevention Week, as well as facts about suicide and suicide prevention. Depression Awareness Month April is Depression Awareness Month, and its theme is "Depression is a Medical Disorder." According to the National Alliance on Mental Illness (NAMI), depressive disorders are the leading cause of disability worldwide. In the United States, up to 5.4 million people experience major depressive episodes each year, and one in five people will have a major depressive episode during their lifetime. Depression, along with related mental disorders such as anxiety disorders, are costly to society. In 2013, the estimated cost of mental and substance use disorders was \$210 billion, according to NAMI. Some people attempt suicide because they experience one of the signs of a major depressive episode, such as extreme or uncontrollable sadness, loss of interest in activities once enjoyed, thoughts of death or suicide, loss of energy or interest in activities, guilt or low self-esteem, fatigue or loss of appetite, disturbed sleep and other problems that interfere with daily life. Depression occurs when a person's thoughts, feelings, and behaviors are not in line with normal expectations. Mental health professionals say that what causes depression is a complex web of biological, psychological, and environmental factors. Some people, especially women, are more likely to suffer from depression. Depression symptoms are different for everyone, and they may change over time. Depression can affect different parts of the brain and cause different behaviors. A person's experience with depression also may be influenced by age, gender, race, ethnic background, marital status, job status, physical health, and childhood history. How to Recognize Depression and Suicide Risk People experiencing depression or suicidal thoughts or plans may display a variety of symptoms,
