The invention relates to a capacitor which exhibits a positive temperature coefficient of capacitance and a power factor correction circuit using the same. Typically, a capacitor, which is generally used as a power supply smoothing capacitor or a bypass capacitor, is constructed to include a semiconductor element such as a spiral inductor and a diode, and has a very low power factor. On the other hand, a so-called active power factor correction circuit (called a PFC circuit hereinafter), which is used in an electronic apparatus such as an electric car or a hybrid car, is usually constructed with a transformer or a reactor, a switching element such as a power MOSFET, and a capacitor. The PFC circuit is an apparatus to convert the current of a commercial AC power supply into a three-phase current, shape the current waveform of each phase to a sine waveform, and power-feed the smoothed three-phase current to a load. In order to raise the line current to be supplied to the load, it is necessary to raise the efficiency of the power supply circuit. The active PFC circuit achieves this by feeding back the output voltage of a rectifying circuit to control the switching speed of the switching element. When applying the active PFC circuit to the electric car, the capacitor used is required to have a high withstand voltage and a very low ESR and in particular, the capacitor is required to exhibit a high, positive temperature coefficient of capacitance, that is, a low temperature coefficient of capacitance. Further, the capacitor is required to have a high power factor. In order to achieve a high power factor, it is known to use the capacitor having a positive temperature coefficient of capacitance (hereinafter referred to as a positive temperature coefficient capacitor or a PTC capacitor) as a bypass capacitor or a power supply smoothing capacitor of a voltage control type and to make the power supply voltage have the same value as the input voltage of the PFC circuit. As a capacitor having a positive temperature coefficient, there have been known a BaO-Al₂O₃-SiO₂ capacitor and a BaO-TiO₂-SiO₂ capacitor. However, a BaO-Al₂O₃-TiO₂ capacitor exhibits only a capacitance of about 0.1.μF and an ESR of about 200 m.Ω, and the temperature coefficient of capacitance of this capacitor is negative. A BaO-Al₂O₃-SiO

What's New in the?

Former Eagles WR DeSean Jackson is reported to have been shown the door in Philly. The move makes a lot of sense. He's still young. He's still very talented. The trade might even benefit both sides. Jackson is due to make \$10.5M in 2017. Given the Eagles' cap situation, they need to cut all the dead weight. Jackson's contract is awful. But his talent is not. Jackson was due to make \$4.9M in 2016. He's still just 25. He's a pro's pro. This should not be a shock to the Eagles. The 2016 season was filled with rumors of a Jackson trade. After the Eagles signed Alshon Jeffery this offseason, it became more realistic. The Eagles are very cap-tight. Their cap situation is awful, but it was always going to be. Jackson's cap number is very low. That's why trading Jackson makes sense. He's young. He's talented. He's making a ton of money. For the Eagles, he is the best remaining option. DeSean Jackson has always been Philly's least favorite superstar WR. When people would suggest the Eagles and the Cowboys trade for each other's players, Philadelphia fans would scoff. And for good reason. Fans love whatever this team is doing on the field. This leaves DeSean Jackson off the teams and in the spotlight. It's not his fault, but it's hard to ignore. Despite being a better, much more gifted player than any of the other Eagles' WRs, Jackson is still popular because of Alshon Jeffery and Nelson Agholor. They, along with the trades of DeMarco Murray and LeSean McCoy, have transformed Jackson from an exciting playmaker into a backup. He's the one guy who is often asked about, but rarely heard. Even the trade rumors that suggested he would be traded didn't do much to keep him in the spotlight. Jackson is second in the NFL with his 15.0 yards per reception this season. But he's not one of the best players in the league. Ryan Mathews' 2017 season has been a revelation. He has shown that the Eagles couldn't
